Word Association

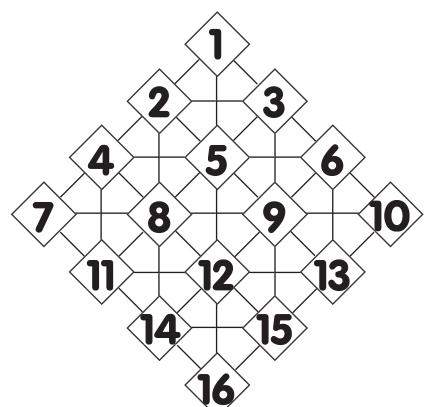

Overview: Students pretend to take a psychological word association test and make-up "personal stories" that connects two unrelated words.

Preparation: Make a copy of Word Association for each student.

What to do: Students (or you) create a list of 16 unrelated words and write that list down in the Association List section. Next, have the students choose 8 two-number combinations and write the words associated with those two numbers in the Combination List section.

Use the grid below to choose the two-number combinations. Combinations are made by choosing a number and any adjacent number.

Example: 8-12 is an acceptable combination whereas 8-3 is not.

Once the students have their list, it's time to play 'Psychologist'. Ask a student the first word in one of their combinations. Then ask what the second word is. Now say something like "Why does A make you think of B?"

Example: The student's combination is CAT and PEN.

Teacher: Why does CAT make you think of PEN? Student: When I was a child, I had a cat. One day, my cat ate my favorite pen.

Ask questions (or have other students ask questions) like a psychologist would.

Student B: How old were you when this happened? Student: I was 7.

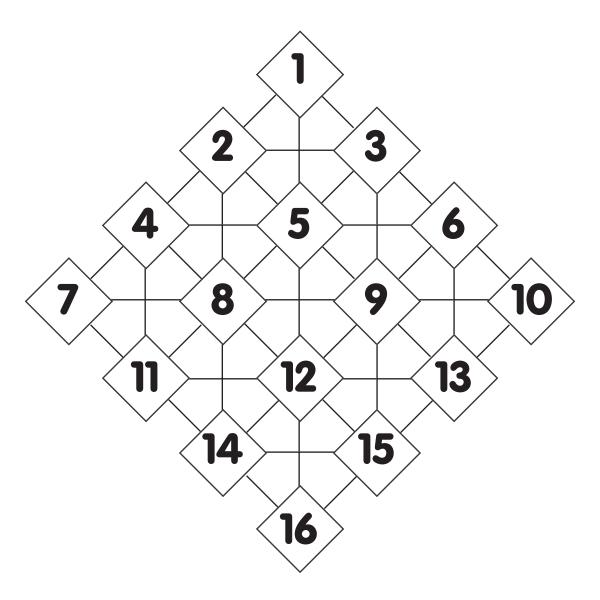

Student C: Why was it your favorite pen? Student: I got it for my birthday.

Encourage students to have fun.

Word Association

Write 16 unrelated words in the ASSOCIATION LIST.

Next, choose 8 two-number combinations and write those word combinations in the COMBINATION LIST. Think of how the two words are associated with each other and tell your story.
